

Yuvraj Singh

SOFTWARE DEVELOPER — FULL STACK DEVELOPER (MERN)

singhyuvraj02202@gmail.com | +91 73988 58039 | Mohali, Punjab, India | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SUMMARY

Full stack developer who builds and ships MERN applications end to end: React interfaces, Express REST APIs, MongoDB and MySQL data models, JWT and Passport authentication, and deployment on AWS, Render, and Vercel. Worked on production web applications during an internship, integrating REST endpoints into live interfaces and optimizing page load performance. Independently built an AI interview platform on the Gemini and Groq APIs.

EXPERIENCE

Front End Developer — Prodesk IT Engineering Services Jun 2025 – Jul 2025 · Noida, India

- Built 10+ reusable React components for a production web application, standardizing layout and form behaviour across desktop and mobile.
- Integrated 5+ REST endpoints into frontend views, removing roughly 40% of the manual data handling the team did before.
- Cut page load time by 30% by profiling render bottlenecks and restructuring component hierarchies and data fetching.
- Shipped authenticated user modules and their database queries, reviewed teammates' pull requests, and resolved defects spanning the frontend and backend.

PROJECTS

AI Interview Prep Platform [Live Demo ↗](#)

React · Node.js · Express · MongoDB · Google Gemini API · Groq API · Recharts

- Built a resume analyzer that extracts PDF text with Multer and pdf-parse, then scores skills and gaps through the Gemini API and returns written suggestions.
- Engineered an adaptive interview engine that grades each answer across six dimensions and selects the next question from the score.
- Reduced AI response time from over 60 seconds to under 2 by merging sequential API calls and replacing a stale SDK version.
- Delivered an analytics dashboard charting score trends, weak topics, and session history, backed by a JWT-secured Express REST API deployed on Render and Vercel.

Wanderlust — Travel Listing Platform [Live Demo ↗](#)

Node.js · Express · MongoDB · EJS · Passport.js · Cloudinary · Mapbox · Bootstrap 5

- Architected an MVC application with full CRUD for listings, Passport.js session authentication, and per-owner authorization rules.
- Integrated Cloudinary multi-image uploads and per-listing interactive maps through the Mapbox API.
- Implemented reviews with star ratings and a fetch-based wishlist that saves and removes without a page reload.
- Added search, category filtering, and price sorting as dynamic MongoDB queries behind a mobile-first responsive UI.

Also built: a Zoom-style video calling app (WebRTC, Socket.IO) — [GitHub ↗](#)

TECHNICAL SKILLS

Languages	JavaScript, Python, Java, SQL
Frontend	React.js, HTML5, CSS3, Tailwind CSS, Bootstrap 5, EJS, responsive UI
Backend	Node.js, Express.js, REST API design, JWT, Passport.js, Socket.IO, WebRTC
Databases	MongoDB (Mongoose), MySQL — schema design and query optimization
Cloud & DevOps	AWS (EC2, S3, Amplify), Docker, CI/CD pipelines, Render, Vercel, Netlify
Tools	Git, GitHub, Postman, Cloudinary, Mapbox, Multer
AI & LLM Tools	Google Gemini API, Groq API, Prompt Engineering, Agentic AI, ChatGPT, GitHub Copilot

EDUCATION & CERTIFICATIONS

B.Tech, Computer Science and Engineering Bharat Institute of Technology, Meerut · Expected 2026	Full Stack Development (MERN) Apna College · MongoDB, Express, React, Node
Diploma, Electrical Engineering BTEUP, Meerut · 2023	SQL and CSS Certifications HackerRank
